

FOLD

FULL-SIZE CARGO BIKE THAT FOLDS COMPACT

MAKE SPACE. SAVE SPACE.

PRESS

A NEW FORM OF URBAN MOBILITY

**Full-size on the road.
Compact at home.
Modular in everyday life.**

FOLD is a full-size cargo bike that combines maximum transport capability with compact everyday usability.

A patented folding mechanism reduces a real cargo bike to a space-saving format within seconds — without compromising stability, handling, or durability.

The result is a new form of urban mobility:

KEY POINTS

- full-size on the road
- compact at home
- modular in everyday life

THE IDEA

Creating space while saving space.

This is the simple idea behind FOLD — the first cargo bike that folds onto its own cargo platform in seconds with just two movements.

The riding experience of a true cargo bike remains completely intact, while opening new possibilities for storage, transport, and travel.

SPACE

FULL-SIZE PERFORMANCE

A cargo bike must first prove itself on the road.

Safe in handling, stable under load, and confident in daily use.

FOLD offers balanced geometry, high frame stiffness, and reliable durability for family life, commuting, and everyday transport — without compromise.

Built for longevity.
Developed for continuous daily use.

KEY POINTS

- safe handling
- stable under load
- daily durability
- family life
- commuting

FOLDS COMPACT

A full-size cargo bike designed for compact urban living.

With only two movements, FOLD transforms from a full-size cargo bike into a compact format.

No tools.
No disassembly.

This space-saving form makes a truly urban cargo bike possible for apartments, elevators, trains, and transport by car or camper.

KEY POINTS

- apartments
- elevators
- trains
- car transport
- camper / travel

MODULAR EVERYDAY USE

Daily life changes — mobility must adapt with it.

The removable cargo box enables child transport, dog transport, or an open platform for nearly anything that needs to move.

Detached tool-free in seconds, the system reduces overall weight by more than 10 kg when full cargo capacity is not required.

Strength, compactness, and modularity define a new category of urban mobility.

KEY POINTS

- child transport
- dog transport
- open platform
- tool-free removal
- 10 kg+ weight reduction

PATENTED FOLDING MECHANISM

Compact construction with maximum stiffness.

The patented folding mechanism is based on a central rotating frame connection that combines compact construction with maximum stiffness and structural stability.

The riding feel of a full-size cargo bike remains fully preserved — even when the system is folded to a compact footprint within seconds.

PATENTED

DESIGNED FOR REAL LIFE

Built for situations that cannot be planned.

For movement through the city.
For spontaneous transport.
For changing phases of life.

Thanks to robust construction, modular architecture, and long-term reparability, every FOLD remains a reliable companion for many years.

KEY POINTS

- city movement
- spontaneous transport
- changing life phases
- reparability
- long-term use

GERMAN DESIGN AWARD 2026 — WINNER

A new reference point for functional, space-efficient urban mobility.

FOLD received the German Design Award 2026 for its innovative concept combining:

full-size cargo performance
compact folding architecture
modular everyday usability

The project establishes a new reference point for functional, space-efficient urban mobility.

KEY POINTS

- full-size cargo performance
- compact folding architecture
- modular everyday usability

GERMAN INNOVATION AWARD 2026 — WINNER

Urban mobility that makes space and saves space.

FOLD is the world's first full-size foldable cargo bike.

In just two moves, it folds onto its own loading surface in under 20 seconds — more compact than a regular bicycle.

Its patented mechanism ensures maximum stability with full load capacity.

Modular, sustainable, and repairable, FOLD represents urban mobility that makes space — and saves space.

KEY POINTS

- folds compact in seconds
- transportable by car, camper, and train
- more compact than a regular bicycle
- space-saving for apartments and urban living
- designed for multimodal everyday mobility

ABOUT AVNSON

Mobility products that rethink everyday transportation.

AVNSON develops mobility products that rethink everyday transportation through space efficiency, durability, and modular design.

The company focuses on:

foldable cargo bike systems
adaptable bicycle architectures
long-lasting, repairable constructions
sustainable mobility for dense urban environments

KEY POINTS

- foldable cargo bike systems
- adaptable architectures
- repairable constructions
- dense urban environments

MAKE SPACE. SAVE SPACE.

A cargo bike that adapts to life — not the other way around.

FOLD unites full-size performance, compact folding, and modular flexibility into a cargo bike that adapts to life — not the other way around.
